

Top 10 reasons why you need EMC for your Microsoft SharePoint Server

- 1 You gain enterprise-scale capabilities to meet business-critical demands—from a cost-effective information infrastructure.**

With innovative storage and information management solutions from EMC, Microsoft's suite of virtualization technologies maximizes server and storage utilization while significantly reducing TCO.
- 2 You need a proven source of expertise on SharePoint implementations and the underlying information infrastructure.**

As a long-time Microsoft® strategic partner, EMC can help you plan, design, deploy, and manage a highly efficient Microsoft Office SharePoint® infrastructure—from smaller-scale to enterprise-level. So you can rely on us for deep application experience and a solid portfolio of industry-leading technologies, services, and EMC® Proven™ solutions.
- 3 Your business demands scalability and performance for physical or virtual environments.**

With consolidated tiered storage from EMC, you can meet service levels for a wide range of application requirements. And our scalable, dependable, cost-effective solutions quickly adapt to information growth. All while delivering the highest performance and availability with the capabilities you need to get the most from your SharePoint environment.
- 4 You must provide unified protection for your Microsoft SharePoint data.**

With a range of proven backup and deduplication technologies from EMC and Data Domain®, an EMC company, you can count on a reliable, efficient, and cost-effective backup/recovery solution that's right for you. You can deliver the granularity of recovery your users require—while ensuring consistent, coordinated recovery of an individual database or an entire farm.
- 5 You want to ensure non-stop operations and fast restores with business continuity.**

Get strong business continuity and disaster recovery options for Microsoft SharePoint environments that align with your RPO and RTO requirements. Our advanced backup/recovery and business continuity solutions enable recovery for both local and remote sites. And you also benefit from rollback and recovery to a specific point in time.
- 6 You need to deploy enterprise content management capabilities.**

The EMC Documentum® content management platform enables complete archival, capture, and records management—across the enterprise. So you benefit from enhanced Microsoft SharePoint content management capabilities for both content and archive services.
- 7 You must ensure the security of your SharePoint data.**

Together with RSA®, The Security Division of EMC, we provide a full suite of offerings that enable you to discover sensitive data at rest, automatically apply policy-based RMS protection, and proactively monitor and report on user access and activities. So you can be sure of your SharePoint data security.
- 8 You want to work with a vendor with proven, documented experience offering integrated solutions for SharePoint environments.**

EMC has documented reference architectures and best practices to address a range of user workloads and business requirements—plus a comprehensive tiered storage portfolio to handle your current and future workload requirements. And deep integration testing through EMC E-Lab™, along with a longstanding engineering relationship with Microsoft, enables us to provide ongoing product support for Microsoft Hyper-V™.

9 9. You want to partner with an industry leader in SharePoint deployments.

Specializing in user experience design, application development, business intelligence, workflow automation, and technical infrastructure, EMC Consulting helps you take Microsoft SharePoint from concept to reality with an experienced, award-winning team.

10 10. You need to accelerate the business value of your Microsoft SharePoint environment.

With over 10,000 consultants, EMC's Global Services organization offers a broad portfolio of strategic consultation, planning, delivery, and support across the entire IT lifecycle—from initial requirements through day-to-day operations.
